The Panzerartillerie were first developed in the early 1930s, as the Wehrmacht began to experiment with the concept of armored warfare. The first Panzerartillerie units were equipped with towed artillery pieces, but these were soon replaced by self-propelled guns. The first self-propelled gun to be used by the Panzerartillerie was the Sturmgeschütz III, which was introduced in 1940. The Sturmgeschütz III was a highly successful

vehicle, and it was used throughout the war. Other self-propelled guns used by the Panzerartillerie included the Wespe, Hummel, and Grille.

The Panzerartillerie played a vital role in the German Blitzkrieg campaigns of 1939-1941. They provided close support to the Panzer divisions, and their firepower helped to break through enemy defenses. The Panzerartillerie also played a key role in the defense of Germany against the Allied invasion of Normandy in 1944. However, as the war progressed, the Panzerartillerie became increasingly vulnerable to Allied air power. In the final stages of the war, the Panzerartillerie were largely destroyed or captured.

The Panzerartillerie were a formidable force on the battlefield. Their self-propelled guns and howitzers gave them the firepower to destroy enemy armor and infantry. They were also highly mobile, which allowed them to keep up with the Panzer divisions. The Panzerartillerie played a key role in the German victories of the early war, and they continued to fight until the very end.
